

September 9, 2008

To Whom It May Concern:

Rubadue Wire Co., Inc. products using ETFE, FEP, PFA insulation and our TCA line of products are not “halogen free”. The insulations used on these products are fluoropolymers and contain the halogen Fluorine. This substance is necessary for obtaining the high temperature and high chemical resistance characteristics that our products provide.

However, neither we nor our suppliers intentionally add the other halogens chlorine, bromine, iodine and astatine. Our products do comply with the Nokia Banned Substance List Version 2008 (Doc. Number: 6-145584). This is based on information provided by our suppliers along with our own investigation. Since these are not intentionally added ingredients we do not routinely test for the presence of these substances.

If you have any questions please contact your Rubadue Wire Co., Inc. sales representative.

Sincerely,

Sean Toland
Quality Assurance Manager
Rubadue Wire Co., Inc.
